

True UHV – Low Power

The **CS202*B** is a True UHV cold head (10^{-11} Torr) where all of the rubber o-ring seals have been replaced with welded joints and metal seals. A CF flange is directly welded to the cryocooler.

These True UHV systems are bakeable to 80C, and the 10K **CS202AB** is bakeable to 1200C if the displacer is removed. (Special Training Required).

Cold tip extensions are available to put the sample right where it is needed in the chamber. The extra cooling power of the CS204*B comes in handy when working with long cold tip extensions.
